the princeton review realizes that acing the ap computer science exam is very different from getting straight a s in school we don t try to teach you everything there is to know about computer science only what you ll need to score higher on the exam there s a big difference in cracking the ap computer science a ab exams we ll teach you how to think like the test makers and focus on what the ap testers really want you to know with a complete review of java language used on the exam learn techniques to help you navigate the multiple choice and free response questions brush up specific skills with practice questions throughout the book and full length practice tests for the ap computer science a and ab exams this book includes 2 full length practice tests one each for the ap computer science a and ab exams all of our practice test questions are like the ones you ll see on the actual exam and we fully explain every answer

with global populations expected to exceed 9.2 billion by 2050 and available land and water resources devoted to crop production dwindling we face significant challenges to secure global food security only 12 plant species feed 80 of the world s population with just three crop species wheat rice and maize accounting for food consumed by 50 of the global population annual losses to crop pests and pathogens are significant thought to be equivalent to that required to feed a billion people at a time when crop productivity has plateaued with pesticide applications becoming increasingly unfeasible on cost efficacy and environmental grounds there is growing interest in exploiting plant resistance and tolerance traits for crop protection indeed mankind has been selectively breeding plants for desirable traits

for thousands of years however resistance and tolerance traits have not always been those most desired and in many cases have been inadvertently lost during the domestication process crops have been effectively disarmed by domestication moreover mechanistic understanding of how resistance and tolerance traits operate is often incomplete which makes identifying the right combination for crop protection difficult we aimed to address this research topic by inviting authors to contribute their knowledge of appropriate resistance and tolerance traits explore what is known about durability and breakdown of defensive traits and finally asking what are the prospects for exploiting these traits for crop protection the research topic summarised in this book addresses some of the most important issues in the future sustainability of global crop production
